DETAILED ACTION

1. The previous Final Office action mailed 12/5/08 is withdrawn. This office action is a Final.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

3. Claims 1-4 rejected under 35 U.S.C. 103(a) as being unpatentable over Hendricks et al. (U.S. Patent 6,675,386) in view of Roberts et al. (US 2003/0095183).

As to claims 1 and 3, Hendricks et al. teaches the steps of:

a central cite (remote site 102) connected to network (Fig. 1, web site 112);

a plurality of cameras (Fig. 1, cameras 102', 102", 104', 104") disposed about an event site, the cameras providing view of the event site from at least two different camera angles (col. 5, lines 27-38), the cameras providing video feeds to the central site via the network (see abstract; col. 3, line 65 through col. 4, line 8), and

means for enabling a user to access the central site and to selectively view the event site by means of at least two of the plurality of cameras (see abstract; col. 18, line 62 through col. 19, line 4; please throughout the patent).

Hendricks does not explicitly teach a processor generating a smooth transitional view between at least two of the plurality of cameras, whereby a continuous change of camera angle is provided.

Roberts teaches a processor generating a smooth transitional view between at least two of the plurality of cameras (*two adjacent cameras*), whereby a continuous change of camera angle is provided (abstract; [0004] and [0011] - *where Roberts discussed upon movement of the target, cameras' images displayed on the monitor whereby target image continuity maintained*).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of Roberts into the teachings of Hendricks for the purpose of making it possible for the camera to execute a smooth focus follow up operation when the camera angle is changed continuously to follow a moving object maintain target image continuity that displayed on the monitor.

Claims 2 and 4 are rejected for the same reasons as discussed above with respect to claims 1 and 3. Furthermore, Hendricks et al. teaches means for sequentially recording the feeds from the at least two of the plurality of cameras (col. 5, lines 34-43; col. 19, lines 10-16).

Response to Arguments

4. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
